Acerbi Carpenterie S.r.l.

At Acerbi Carpenterie we have been doing metalwork since 1966, and now specialise in planning, making, and assembling medium and heavy structures for factories, railway stations, cable-traction lines, electricity pylons and radio beacons, and industrial units such as blast furnaces and so on. Worthy of note is our experience in manufacturing staircases, especially for hotel fire escapes.

We have our own engineering department which uses the latest IT, such as CAD planning and processing. For the laying and installation of our products, Acerbi Carpenterie can count on highly qualified staff. We use crane lorries for assembly, or helicopters for sites which are difficult to access or in the mountains. At Acerbi Carpenterie we have a business network covering Italy and the whole world!
