

Quintetto OLS S.r.l.

At Quintetto OLS we design and implement training solutions using innovative methods and technologies. Quintetto OLS looks after all stages in the planning and implementation of training, from analysing needs, measuring skill levels using assessment tools, detailing the training process, providing training by technology and e-learning instruments or using the blended model (classroom learning + e-learning), technical support and content (tutors, mentors, lecturers), constant monitoring of progress (detailed and summary reports), and assessing final benefits.

Quintetto OLS has developed its own multi-channel e-learning platform, comprising the following modules: Learning Management System (LMS), Learning Content Management System (LCMS), and Document Management System. We also have a wide range of courses in our catalogue, including IT, Area End-User (ECDL, MOS, Office), Business Training and Soft Skills, Language Learning (English, French, German, Spanish, Italian for foreigners, etc.), and legal training. Starting with contents provided by our customers or using our own, Quintetto OLS can design and develop standard SCORM e-learning courses. Here are some of the examples of courses and products we have prepared: “Security for Minors on the Internet”, course on “Consolidated Act 81/2008: Workplace Health and Safety," multimedia CD "Dates in the History of Italy."
