INART SERVICE Soc. Coop.

Inart was founded in 1978 as an association of qualified engineers and architects. Nowadays, the Studio is made up of more than 40 partners, contractors, and employees at our three main premises in Courmayeur, Aosta, and Champoluc.

Our main work comprises providing services for public and private sector building companies, including: architectural and structural planning, land planning, works management, workplace health and safety, land registry, topography, acoustics, energy saving, and the auditing of plans. All these services are available to private individuals and companies and to the public sector.

Inart can also take care of overall planning for any additional services and works management. We can also assess environmental impact, workplace health and safety, the preparation and management of contract work, fire prevention, structural diagnosis and planning, plant and environmental

planning, energy and acoustic analysis and certification, and a complete range of mapping and registry facilities.

Our curriculum has been put together over thirty years, and the size of our company is an indication of our professionalism, flexibility, and reliability. The range of services we offer is proof of the level of training we require, and is a guarantee of the speed and level of service we provide, as well as the reason for our rates and quality results. Since we work out of three different premises, we can reach you very quickly and at a lower cost.
