MADE IN VDA

Ise-Net S.r.l.

Ise-Net S.r.l. is a spin-off of the Turin Polytechnic, and is part of the Italian and international panorama of companies specialising in the environment. This is especially the case for applied geology, environmental engineering, 3-D monitoring using laser scanners and drones, and the development of local IT systems.

Since June 2013, we have been one of the few companies in Europe to have a VZ-4000 laser scanner, an extremely precise instrument which we use for 3-D reconstructions with 1 cm precision working from 4 km away. Qualified pilots fly our drones and, according to ENAC Standards, we can collect high resolution images and footage. Applied Geology and Hydrogeology are very broad sectors where the company can provide a range of

solutions.

We work with universities and research centres from all over the world (China, Europe, Mexico, and Russia) and can guarantee extremely high standards. Company staff and contractors are all university lecturers or post-doctorate researchers, and most of them speak Italian, English, and French. We are also part of the Italian "GEONETCOM" company network and specialises in monitoring from above the earth and from satellites.
