Alpiflora S.n.c. di Favre Ivano e Davide

Alpiflora makes essential oils and marinades for inclusion in various types of cosmetics products and general well-being.

From medicinal plants grown directly by ourselves, with no manipulation by third parties, we produce extremely pure essential **oils of thyme, mint, sage, rosemary, lavender, and extracts of edelweiss, wolfsbane, yarrow, plantain, St John's wort, mauve, and marigold**, for use in cosmetics products.

We set up our company Alpiflora out of a sense of respect for the rhythms of nature and the wisdom of tradition and the art of healing. We do not use pesticides or chemical fertiliser, because we feel that any product that comes into contact with the human body needs to be as natural as possible.

All our cosmetics have been made WITHOUT the use of:

- mineral oils, paraffin, or oil by-products

- soaps which are aggressive for the skin
- artificial perfumes
- artificial colourings

All our plants are grown in Valle d'Aosta, either near Hône or in the Champorcher Valley.

We are a zero-mile company, and our final product is a summary of our whole raison d’etre: ALPIFLORA.
Our strong points are complete traceability for all the plants we grow, through the various stages of processing, up to packaging and labelling; in this way our customers realise they are using **top-quality products**.
