ThallosJet Srl

ThallosJet S.r.l. was founded in 2012, and now concentrates mainly on to industrial objectives:

- Developing innovative products for industrial printing and for the biotechnology sector.
- Marketing finished products for new markets.

Our **main work** at ThallosJet includes:

1. Research Company: engineering work for third parties.
2. Developing and making inks for special sectors and uses.
3. Re-filling empty cartridges with our own inks or those made by third parties, and selling them.
4. Consulting services for printing system parts: matching inks and heads, "printing engines" (hardware and firmware).

ThallosJet **products and services:**

- Creating a **new cartridge/ink system** using Thermal Ink Jet (TIJ) technology on materials where printing is not now possible (e.g. foodstuffs, plastics, glass, etc).

- Designing and co-designing with companies from the life sciences sector to **make innovative products in the biomedical field** (e.g. tags for marking and analysing tumour markers in body liquids, or in foetus or tumour cells, micro-dosing single cells to characterise pharmaceutical active ingredients.

Our string points at ThallosJet are the experience of our founders (Olivetti, STMicroelectronics, Indesit), and the more than 30 years' development of printers and printer heads.
